Protec MG-500C Thickness Gauge

The MG-500C is a cutting edge digital thickness gauge featuring a sub micron indicator. It is equipped with an automatic zero-reset function and, when connected to a printer, provides a variety of data operations, saving time and labor.

The design of the MG-500 Series has been continually improved over time and in response to customer feedback. The shape of the measurement table and head, the measurement power (g) and pressure (kg/mm²), and other features have all been adjusted to provide excellent accuracy, especially when measuring soft materials such as mesh or film.

PRODUCT OPTIONS

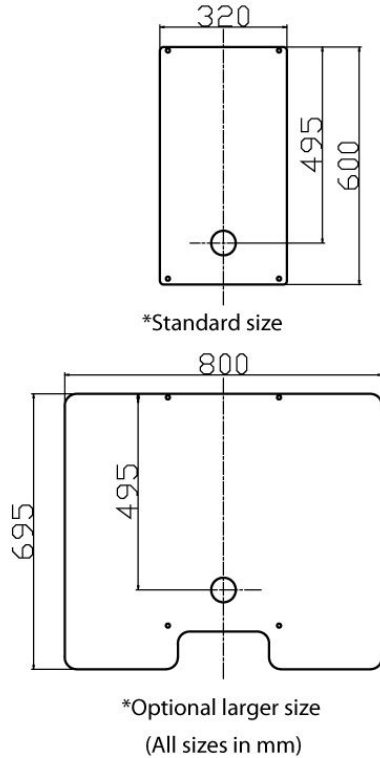

Dimensions

600 x 320 mm (~23.5" x 12.5"), 695 x 800 mm (~27.25" x 31.5") sizes available
