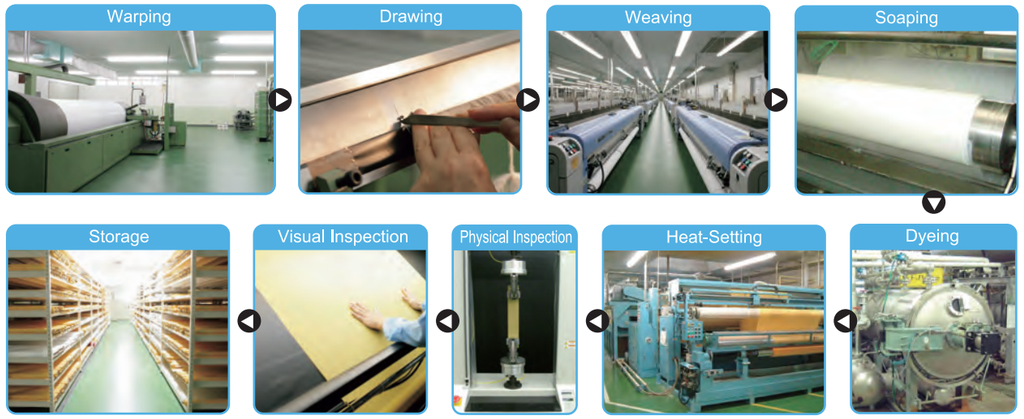
Comparison of technical features

Products		Material	Tensile Strength	Dimensional Stability	Adhesion with Emulsion	Anti-Static Capability	Color Availability	Suitable Applications
V-SCREEN NEXT		TLCP (Thermotropic Liquid Crystal Polyarylate)	2100N/mm²	Top Level Long Run Press	Good	N/A	Beige	Solar Cell, MLCC, LTCC, PWB, LCD, TSP & etc.
Metal series	M-10	SUS 304	1000N/mm²	Top Level	Good	Effective for Press	Metallic	Solar Cell, PWB, Capacitor, HIC, Bottle, Hotmelt Ink, & etc.
	M-13	SUS 304	1300N/mm²	Top Level	Good	Effective for Press	Metallic	Solar Cell, Capacitor, HIC, PWB & etc.
	M-30	Super SUS	3000N/mm²	Top Level	Good	Effective for Press	Metallic	Solar Cell, MLCC, LTCC, HIC & etc.
	W-40	Tungsten	4000N/mm²	Top Level	Good	Effective for Press	Metallic	Solar Cell, MLCC, LTCC, HIC & etc.
	HDM	SUS 304	1000N/mm²	Top Level	Good	Effective for Press	Metallic	Thick-Film, Ceramic Decal & etc.
α series (Alpha)	L-Screen	Conjugated High Modulus Polyester	850N/mm²	Excellent	Excellent	Effective till Degreasing	White Amber Lemon	PWB, Graphic, DVD, Name Plate, Decal, Glass, Bottles, Textile & etc.
	UX Screen	Super High Modulus Polyester	790N/mm²	Excellent	Excellent	Effective till Degreasing	White Amber Lemon	
	EX Screen	High Modulus Polyester	600N/mm² or higher	Excellent	Excellent	Effective till Degreasing	White Amber Lemon	
AS Screen		High Modulus Polyester	600N/mm² or higher	Excellent	Excellent	Effective for Press	White Amber Lemon	Plastic Substrate
CATEX	L-Screen	Conjugated High Modulus Polyester	850N/mm²	Good	Good	Effective till Degreasing	White Amber Lemon	Graphic & Clear Coat
	UX Screen	Super High Modulus Polyester	790N/mm²	Good	Good	Effective till Degreasing	White Amber Lemon	Graphic & Clear Coat
	EX Screen	High Modulus Polyester	600N/mm² or higher	Good	Good	Effective till Degreasing	White Amber Lemon	Graphic & Clear Coat
β series (Beta)	EX Screen	High Modulus Polyester	600N/mm² or higher	Good	Good	N/A	White Amber Lemon	Textile, Garments, Glass, Ceramic Tile, & etc.
NL Screen		Nylon (PA 6.6)	450N/mm² or higher	Unsuitable	Excellent	N/A	White Amber	Bottle, Container & Curved Surface

Production process for synthetic screen printing mesh

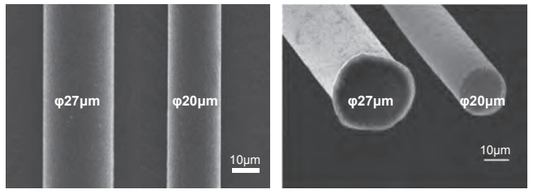


Extra Value with Advanced Mesh Technology

Next Generation TLCP (Thermotropic Liquid Crystal Polymer) Monofilament Mesh for High Precision Screen Printing Applications

Material

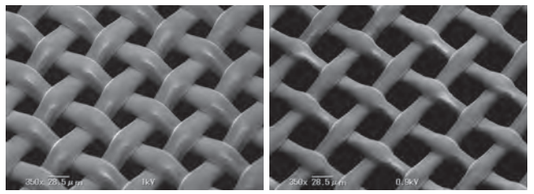
TLCP (Thermotropic Liquid Crystal Polymer) Monofilament thread available as fine as 20µm in diameter.



PET φ27µm TLCP φ20µm PET φ27µm TLCP φ20µm

On-Press Benefits

- ☐ Excellent dimensional accuracy & longevity
- ☐ Improved fine line resolution
- ☐ Thinner ink deposit & smoother ink transition

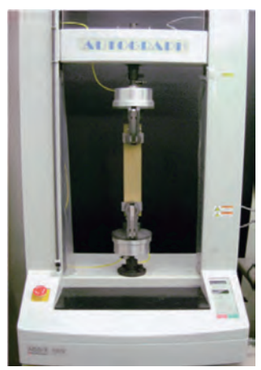


PET MESH 165-027/420PW V-SCREEN NEXT 420-20

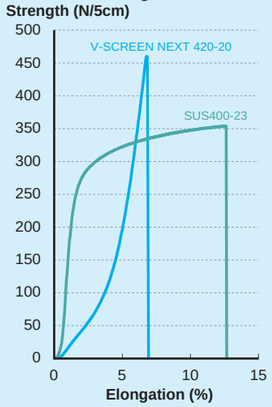
- ☐ Super fine threads create larger mesh openings, which reduce mesh interference to the print image and improve ink transition.
- ☐ Thinnest commonly available PET threads are φ27µm, compared with V-SCREEN NEXT's φ20µm.
- ☐ Smooth mesh surface helps achieve proper emulsion Rz value a key factor contributing to the highest possible resolution.

Outstanding Physical Properties

V-SCREEN NEXT features excellent tensile strength and recovery elasticity, as shown in the diagrams below.
Benefits: ☐ High screen tension for dimensional accuracy
☐ Minimal screen tension loss and distortion even after long press runs

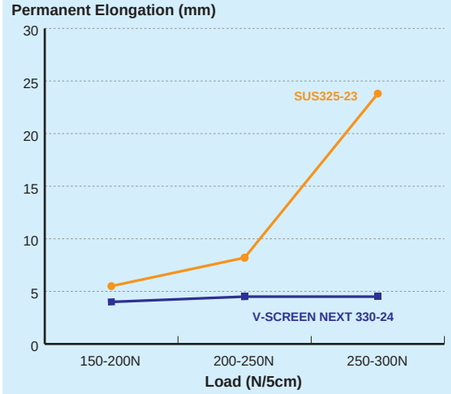


■Tensile Strength Test



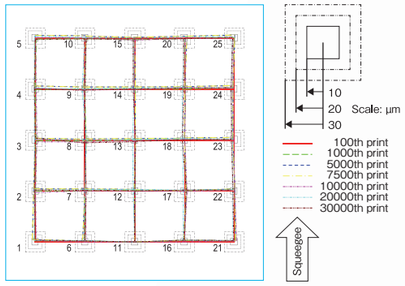
■Tensile strength test method in accordance with ISO1096-1990
■Sample strip width：5cm
■Sample strip length：20cm
■Stretching speed：10cm/min

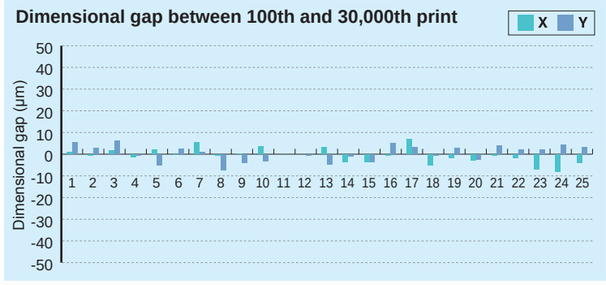
■Repeated Load Test



■Repeated load test method: Amount of permanent elongation measured after sample strip run through 50 load/release cycles
■Sample strip wdth：5cm
■Sample strip lenght：20cm
■Stretching speed：10cm/min

Superior Dimensional Accuracy Proven by 30,000 Print Test



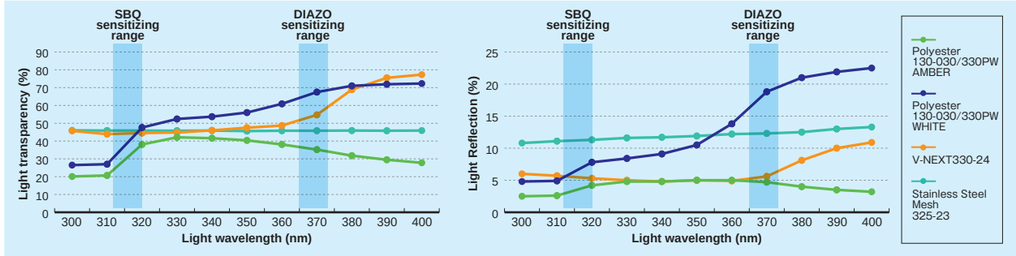


Screen Parameter	
Frame OD	：320mm×320mm
Frame type	：Aluminum cast frame
Mesh type	：V-SCREEN NEXT 420-20
Screen tension	：28.4N/cm
Stretching angle	：23 degrees
EOM	：10µm

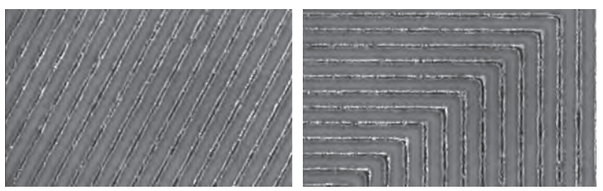
Printing Parameter	
Printer：LZ-150	Squeegee type ：Micro-Squeegee
Clearance：2.0mm	Squeegee shore ：70 shores
Squeegee press.：+50kPa	Squeegee angle ：70 degrees
(kPa/170mm)	Squeegee width ：170mm
Down stop：Free	Squeegee speed：200mm/sec

High Performance Exposure

V-SCREEN NEXT boasts higher light transparency and lower light reflection than stainless steel wire mesh as shown in the light spectrum analysis below. This enables easier set-up of exposure time for fine screen resolution.



Excellent Resolution for Fine Line Printing



Printing & Screen Parameters	
Print output	：20µm Line & 40 µm Space
Paste	：Ag paste for LTCC (300Ps・sec)
Mesh type	：V-SCREEN NEXT 420-20
EOM	：10µm

Specifications

Mesh code		Mesh count /cm	Mesh count /inch	Thread diameter µm	Mesh thickness µm	Mesh opening µm	Mesh open area %	Theoretical ink volume cm^3/m^2
V-SCREEN NEXT	420-20	165	420	20	27±3	40	45	12.1
	380-20	150	380	20	27±3	47	49	13.3

	330-24	130	330	24	33±3	53	47	15.6

The above specifications may change without notice as a result of product quality improvements.
Please ask your sales representative or supplier for availability or more information.

Metal series™

Metallic Wire Mesh for High Precision Screen Printing Applications

All of NBC's metal meshes are woven with a special screen printing grade of precision metal wires; giving greater tensile strength, lower elongation and quality consistency to fulfill all technical demands of screen printing applications in the electronics and photovoltaic markets.
We are proud to introduce the 5 ranges of precision metal wire mesh listed below.

M-10 (Standard Stainless Steel Wire Mesh)

M-10 is NBC's standard stainless steel wire mesh produced with rigorous quality control.
It is widely used for many sophisticated screen printing applications such as Printed Circuit Board, Membrane Switch, Solar Cells, Ceramic Packages, Capacitors and so forth.
The reliable quality and print repeatability are well recognized by those markets.

M-13 (Upgraded Stainless Steel Wire Mesh)

M-13 is upgraded NBC stainless steel wire mesh which is woven with 30% stronger stainless steel wire compared with standard stainless steel wire. The extra tensile strength of M-13 achieves higher screen tension and optimizes printing parameters for further improvement of dimensional accuracy, and prolongs screen service life.

M-30 (Super Stainless Steel Wire Mesh)

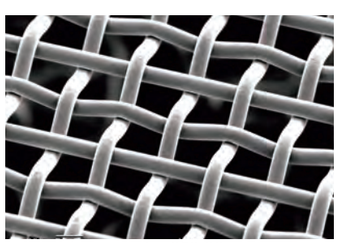
M-30 has exceptionally low elongation and large mesh open area.
It is woven with super stainless steel wire with 3 times stronger tensile strength than that of standard stainless steel wire. It minimizes mesh interference to print image while ensuring excellent paste transition; making it suitable for challenging applications utilizing high viscosity paste, such as Solar Cell, MLCC, LTCC and so forth.

W-40 (Tungsten Wire Mesh, Next Generation)

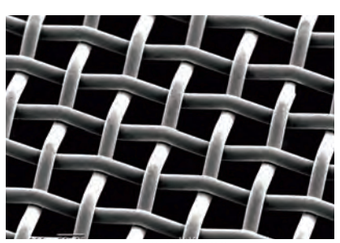
W-40 is the next generation of wire meshes woven with tungsten wire which has even greater physical stability and print repeatability than the above super stainless steel wire mesh. Comparison of tensile strength per sq.mm is shown in the chart next page above.

HDM (Heavy Deposit Mesh)

HDM is developed for specific screen-printing applications that require a heavy ink deposit.
The magnified photo below shows unique structure of HDM compared with standard wire mesh.



HDM 250-30



M-10-250-030

α series TM

L-SCREEN TM UX-SCREEN TM

Top Quality, Super High Modulus Polyester Monofilament Mesh for Precision Screen Printing Applications

α series TM NEWSUPER treatment

NEWSUPER treatment is a combination of NBC's unique chemical and atmosphere plasma treatment (Corona treatment) which modifies the surface properties as well as the structure at the submicron level, as in the SEM photo below.

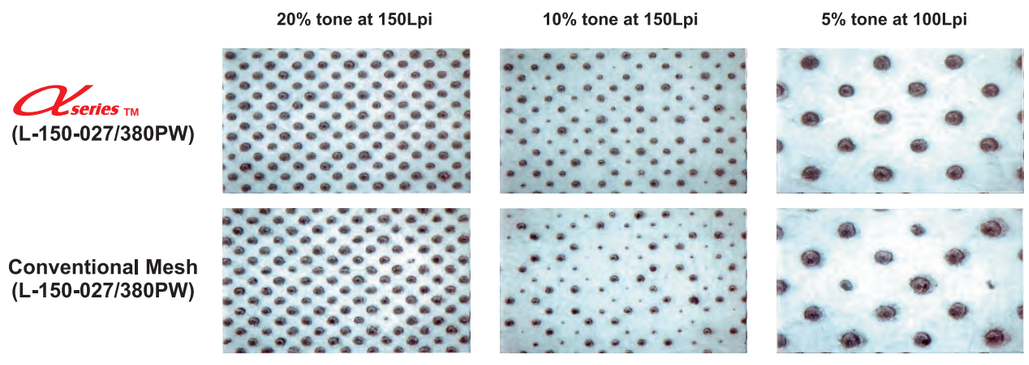
Original mesh

NEWSUPER treatment

α series TM Benefits of NEWSUPER treatment

1. Smoother paste/ink transition

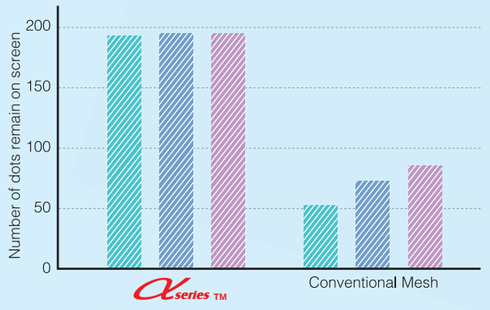
Modified mesh surface in the submicron level reduces the contact area of paste/ink particles, improves paste/ink transition through the mesh and optimizes print resolution, making it ideal for halftone and fine line printing.

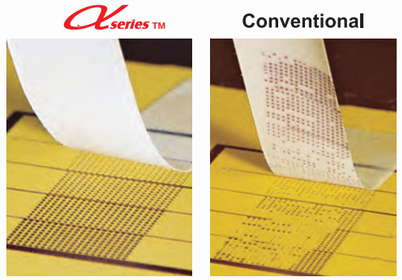


2. Extended screen service life

Modified mesh surface with NEWSUPER treatment holds emulsion/capillary film tight and it prolongs screen service life particularly on long run prints or printing with abrasive paste. The adhesion property of mesh is proven below by a comparison test with self-adhesive tape.

■ **Comparison of mesh adhesion property (Dot-peeling with self-adhesive tape)**





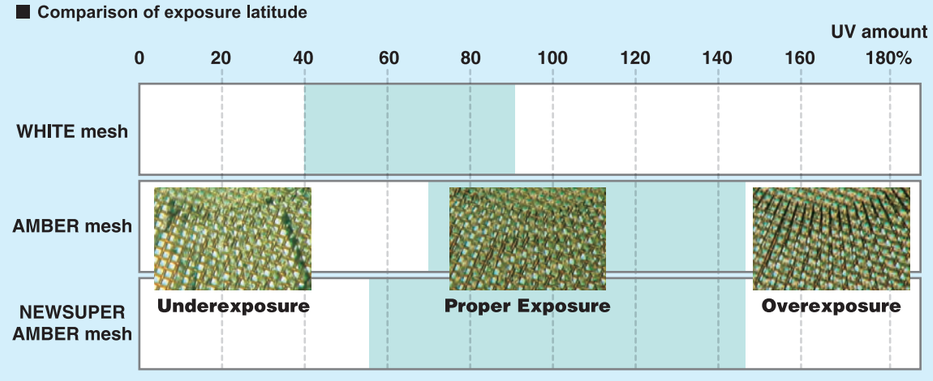
Test Parameter
Mesh type: L-Screen 150-030/380PW
Emulsion: Dual-Cure
EOM: 10 µm
Dot size: 0.3mm, 0.4mm and 0.5mm square dot
Number of dots: 200 each
The above dots are peeled-off by self-adhesive tape.
The number of dots remaining on the mesh are counted.

3. Extended exposure latitude

NEWSUPER treatment not only offers improved adhesion of emulsion/capillary films; it also extends the limit of exposure latitude (underexposure). This is particularly effective for fine detail and use with CTS systems. The below diagram shows the comparison of exposure latitude of three different types of mesh.

Screen Parameter
Mesh: UX 110-035/280PW
Mesh Thickness: 50µm
Emulsion: Dual-Cure
EOM: 12µm
Exposure Unit: Metal halide 3KW with Fresnel lens
Illuminance: 7.0mW/cm2
Distance to screen: 90cm distance from light bulb

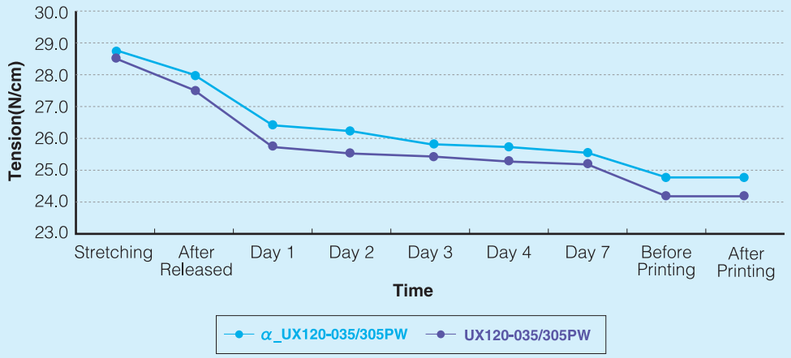
■ **Comparison of exposure latitude**



α series™ Optimized physical property

1. Minimized screen tension loss

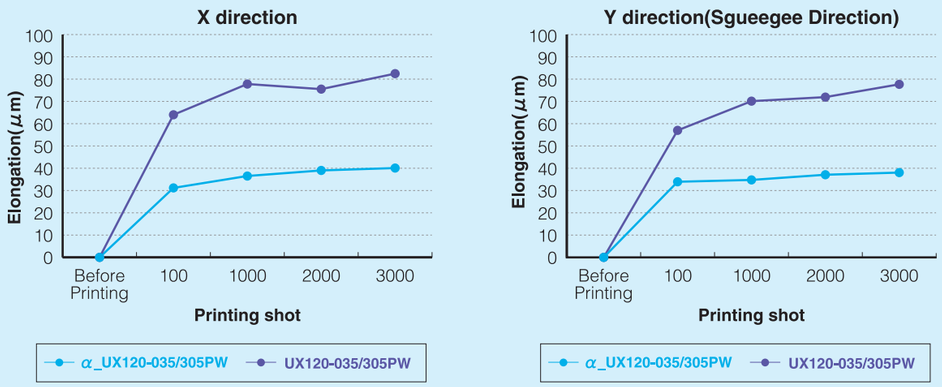
α series of NBC high modulus polyester mesh is further improved by an optimized heat-setting process and rigorous quality control system to minimize screen tension loss after stretching and printing process. The below diagram shows the comparison data in tension loss between α series and original mesh.



2. Further improved dimensional accuracy

The diagrams show the comparison data of dimensional gap between the screen image (300mm ×300mm) and printing result, proving that the dimensional accuracy of α UX120-035/305PW is significantly improved and more consistent for long run printing.

Dimensional gap change from 100th print to 3000th print



Dimensional gap between screen image and 3000th print

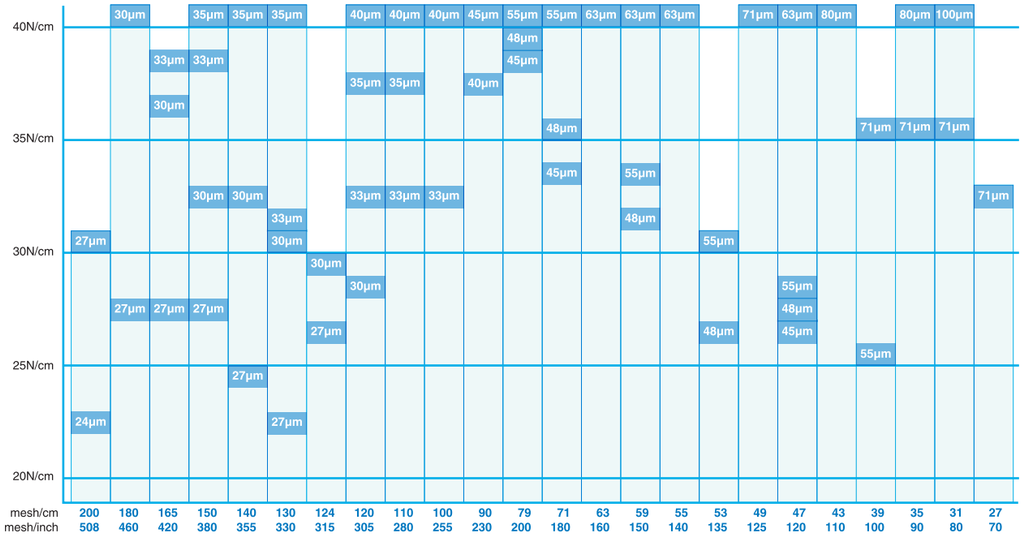
Highest stretching tension of α series™

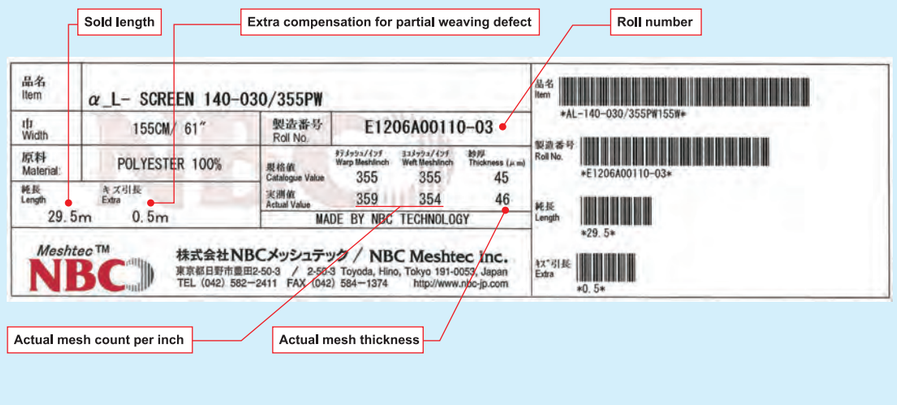
Highest stretching tension value of NBC α series polyester monofilament meshes.



Remark: The above screen tension vaues are calculated from breaking tension in 1000mmx1000mm sized mechanical stretching devices and they are measured by NBC tension meter. NBC takes no responsibility for accidental damage to the mesh or improper stretching operation.

Top quality guaranteed

Every roll of NBC polyester mesh is supplied with an inspection tag. While flaws are kept to a minimum by careful quality control, any flaw found under our thorough inspection is clearly marked to prevent it being stretched into your image area. Thickness and mesh count are precisely controlled and documented on the tag -- critical information for setting your production standards. You will keep your presses running and save time spent troubleshooting.
NBC also compensates for flaws by adding one half meter of mesh to the end of the roll free of charge for each flaw...now that's value.



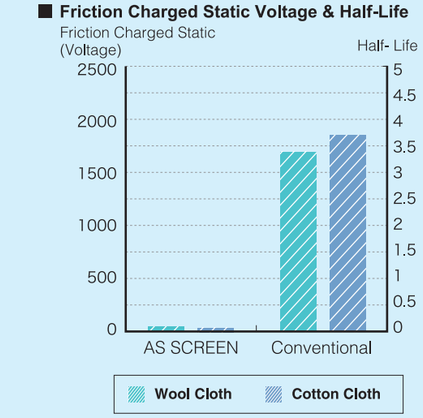
NBC additional process for extra function

Anti-Static Resin Coated Polyester Monofilament Mesh

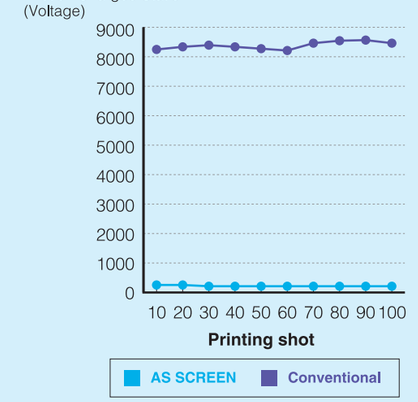
AS SCREEN™

AS SCREEN is special resin coated high modulus polyester mesh which has permanent anti-static properties effective throughout the printing process. It minimizes static charge electricity and prevents pin-holes and ink splashing. Emulsion and capillary films adhere well to this mesh.
AS SCREEN is available on request in mesh counts from 120 to 508 threads/inch (47 to 200 threads/cm).

■ Friction Charged Static Voltage & Half-Life



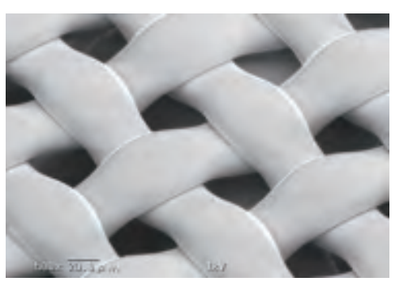
■ Friction Charged Static Voltage at Lift-Up Motion



Anti-Static Resin Coated Polyester Monofilament Mesh

CATEX™

CATEX mesh reduces your ink consumption by 20-30%. Especially designed for high production clear coating where a minimum ink deposit is a priority. CATEX can also be helpful when printing back-lighted panels where uniform ink deposit is extremely critical.
CATEX mesh is available up to 240cm wide.



Standard Fabric

Ink deposit 100%.

Calender Side Up

Squeegee side glossy.
Reduction approximately 25%.

β series™

High Modulus Polyester Monofilament Mesh for General Screen Printing Applications

β series is classic high modulus polyester monofilament mesh which is produced under NBC's high quality standards. The dimensional accuracy and tension stability are kept at a high level.

NL SCREEN™

Nylon Monofilament Mesh for Specific Screen Printing Applications

NL SCREEN, nylon monofilament mesh is well-suited for printing onto curved or rigid surfaces such as containers, ceramic and so forth because of its flexibility and elasticity. NL SCREEN also has reliable mechanical resistance and good emulsion adhesion, making it suitable for printing with abrasive pastes or substrates.

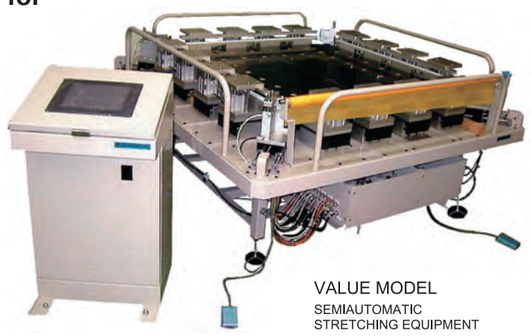
VALUE MODEL Series
Precision semiautomatic stretching equipment

The VALUE MODEL is a semiautomatic stretching device designed and manufactured by NBC for precision screen.

The VALUE MODEL stretching device was developed by NBC in response to customer demands for higher stretching tension. NBC was determined to not just slightly improve tired concepts, but to create a real breakthrough in stretching technology to reinvent stretching. As a result the VALUE MODEL uses many sophisticated controls not found on conventional equipment.



VALUE MODEL
SEMIAUTOMATIC
STRETCHING EQUIPMENT

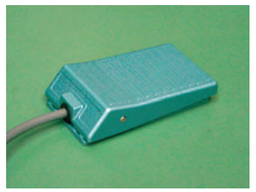
VALUE-MODEL Specifications

	VALUE 1150	VALUE1360	VALUE1550
Body dimension (L×W×H)	1600×1600×1000(mm)	1840×1840×1000(mm)	2000×2000×1000(mm)
Body weight (kg)	Approx. 500	Approx. 630	Approx. 780
Stretching effective area	900×900(mm)	1080×1080(mm)	1250×1250(mm)
Power supply	85 - 264V AC, 100W or less	85 - 264V AC, 100W or less	85 - 264V AC, 100W or less
Air source	Dry air 0.7 MPa or more, Approx. 50 NL/cycle	Dry air 0.7 MPa or more, Approx. 70 NL/cycle	Dry air 0.7 MPa or more, Approx. 90 NL/cycle

NBC proposes “new stretching technique”

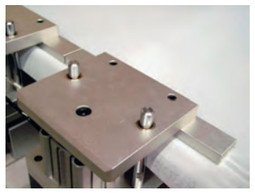
Simply place a screen on the table and start stretching

Place screen on table

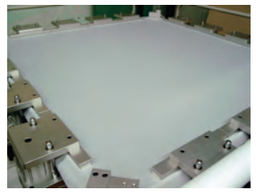


Press foot switch to activate corner stretching

Press start on Liquid crystal touch panel



Automatic clamps grip mesh



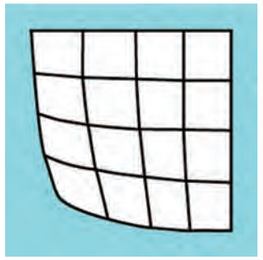
Fabric stretched to preset tension

Installation of screen
↓
Foot switch
↓
Operation with touch panel
↓
Automatic clamping and stretching

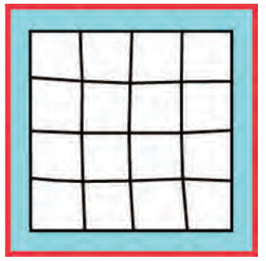
Pivoting clamp option provides additional clearance for wire mesh, helping avoid wrinkles.

The most striking feature of the VALUE MODEL is its ease of operation. After placing the screen on the table all that is required is setting the corner clamps with the foot switch and selecting start on the liquid crystal display. The VALUE MODEL automatically clamps the fabric and stretches it to the set tension.

Screen-mesh distortion prevented with the diagonal tensioning system

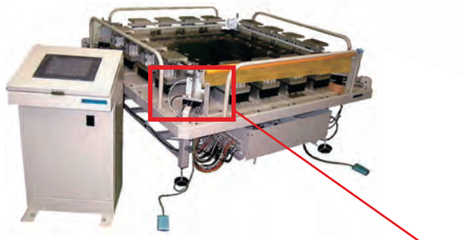


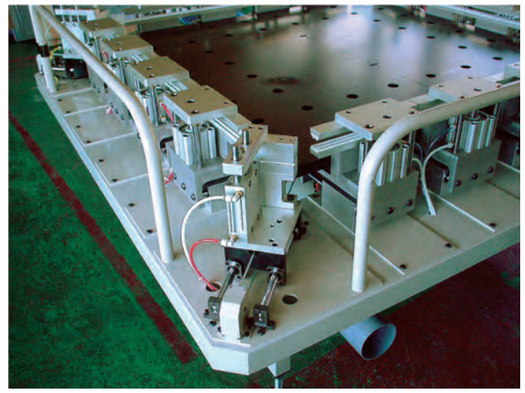
Distortion created by conventional stretching equipment



Distortion free corner stretched by VALUE-MODEL

The real ground breaking feature of the VALUE MODEL is its diagonal stretching. Adding tension in the corners is counter to the traditional wisdom of stretching, because most stretching equipment adds slack in the corners to prevent tearing the mesh during stretching. The chart on the left clearly shows the distortion created in the corners by conventional stretching equipment. The chart on the right shows the uniform tensioning results in the corners achieved every time with the VALUE MODEL.





Magnified view of corner (Diagonal tension system)

Easy to operate control panel

The easy to operate control panel allows anyone to accurately stretch screens to high tension. The programmable processor can memorize up to 1million stretching programs. Each stretching program can be customized to satisfy any customer needs using 18 parameters including diagonal stretching, overall tension and aging time. When it’s time to stretch just set the screen tension desired, and with one touch of the button screens are brought right up to the correct tension.
